

Ziyara - Tourist Sites Guide

Digital Egypt Pioneers Initiative (DEPI)

Track: Android Mobile App Development

Team Leader: Ahmad Hany Elhawary

Team Members: Ahmed Abdullah, Viola Ibrahim,
Abdalla Allam, Ali Amr

Date: April 2026

● Executive Summary

- **Ziyara** is a simple mobile app that helps people find and learn about famous places in Egypt. Whether it's a historic place or a popular tourist spot, our app makes it easy for users to get there using GPS and read cool facts about each location.
- We noticed that many tourists struggle to find all the great spots in one place, so we built **Ziyara** to be their digital guide. We are using modern tools like Kotlin to make the app fast and easy to use for everyone.

● Problem Statement

- Tourists in Egypt often rely on scattered sources (websites, blogs, maps) to find information about attractions, which makes the process time-consuming and confusing.
- Many platforms do not provide complete details in one place, such as location, ticket prices, and a brief description of the site.
- Navigation to tourist destinations can be challenging, especially for visitors unfamiliar with the area, due to lack of clear and integrated GPS guidance.
- As a result, tourists may miss important places or have a less enjoyable and less organized travel experience.

● Project Objectives

- **A Personal Tour Guide:** To transform the way tourists explore Egypt by replacing scattered web searches with a single, reliable companion.
- **Stress-Free Navigation:** To make sure no visitor feels lost by giving clear, practical tips on how to reach any monument easily.
- **All-in-One Information :** To keep everything—locations, ticket prices, and quick intros—handy in your pocket so you can focus on the trip, not the search.

- ***Simplified History:*** To use technology to share the stories of our ancient sites in a way that is easy, fun, and engaging for everyone to read.
- ***Budget Confidence:*** To take the stress out of trip planning by providing transparent, real-time details like ticket prices and exact directions, making ancient sites feel more accessible to everyone.

● Project Scope

Project Objective

- **Goal:** To provide a comprehensive digital guide for tourists to discover and navigate local historical and cultural landmarks.
- **Outcome:** A functional Android application that simplifies the travel experience through location-based information.
-

In-Scope Features (What we are building)

- **Location Directory:** A curated list of tourist sites with descriptions, high-quality images, and historical facts.
- **Interactive Mapping:** Integration with Map APIs to provide directions and distance calculations to specific sites.
- **User Profiles:** Allowing users to save "favorite" locations or create a basic itinerary.
- **Search & Filter:** Ability to sort locations by category (e.g., museums, parks, historical sites) or proximity.
- **Multilingual Support:** Providing content in both Arabic and English to accommodate local and international users.

Technical Constraints

- **Platform:** Native Android (Kotlin/Java).
- **Timeline:** Deadline: 7/17/2026.
- **Data Source:** Reliance on a specific database or API for tourism content.

● Technical Stack

- Mobile Development
 - **Language:** Kotlin
 - **Framework:** Android (Jetpack Compose)
- Architecture
 - MVVM (Model - View - ViewModel)
- Networking
 - Retrofit (for API calls)
 - Gson (for JSON parsing)
- Local Storage
 - DataStore (for saving user preferences)
- UI & Design
 - Jetpack Compose
 - Material Design 3
 - Figma
- Google Play Services
 - GPS
 - Wi-Fi
 - Mobile Network
- Tools
 - Android Studio
 - Git & GitHub
